

Molten metal treatment products for aluminium producers of foil, extrusion billets and ingots

Aluxal - Aluclean

Covering and cleansing fluxes for aluminium alloys. Wall cleaner formula to reduce layers of drosses formed on the furnace bottom and lining.

Alloying Tablets

Compacted powder of manganese, Copper, Iron or Titanium with Aluminium or flux, to correct analysis of aluminium alloys.

Ceracote

New micro-adhesive protective coatings improving adherence performances and cosmetic finish on difficult areas in contact with aluminium alloys.

Elidron

Fluxes in tablets for degassing aluminium alloys in melting-holding furnaces and transport ladles.

Firecote

Insulating and aluminium repellent coating for ceramic or refractories substrates.

Flotab

Tablets to reduce metal oxidation and dross built up in reverberatory furnaces. Ideal for the reduction of corundum build up.

Germinal

Titanium & Boron in tablets or in coil to perform grain refinement of the alloy micro structure. Available with phosphorous for treatment of hypereutectic alloys

Grafo Spray + White Spray

Aerosol spray cans for protection and storage of extrusion dies. Graphite or Boron nitride based for application on ceramic or steel substrates.

Krystal & Crystal

Granulated fluxes for dust and emission free dressing and covering process on aluminium alloys.

Magclear

Fluxes to reduce Magnesium's presence in aluminium alloys.

Mag Si-Clean

Special flux for dross removal-treatment of Aluminium-Magnesium alloys containing >3% Mg, such as Al Mg5 Si2 Mn.

Metalcote

Lubricants for Hot Top and D.C. billet production , aluminium extrusion (die, dummy block and shear blade).

Metalcote Sticks

Solid lubricant in sticks form to apply on dummy blocks, billet ends, extrusion dies and hot temperatures areas

Nael

Flux for treatment of aluminium alloys, series 7000-8000 and total reduction of sodium and alkali metals.

Newcote

Boron nitride coatings for ceramic components, hot top rings, thimble and ladles.

Metkote

Protective coatings for ingot molds, launders and dross pressing heads.
